

# 2024-09

**2024-09-13 [github.com/lochidev/Expandroid](https://github.com/lochidev/Expandroid)**

expandroid espanso android screenshot app.jpg

“ Expandroid lets you send custom messages with a trigger. Want to quickly type out the current date in a specific format? Or do you want your emojis to replace your triggers? You can do it all cross platform with espanso but now on android too with this app!

[espanso](#)-nya Android

**2024-09-14 [tailscale.com/kb/1223/funnel](https://tailscale.com/kb/1223/funnel)**

tailscale-funnel-diagram.png

“Tailscale Funnel lets you route traffic from the broader internet to a local service running on a device in your Tailscale network (known as a tailnet). You can use it to share a local service, like a web app, for anyone to access—even if they don’t use Tailscale.”

hmm, mirip2 kaya [ngrok](#) dan [cloudflare tunnel](#)

**2024-09-14 [beacondb.net](https://beacondb.net)**

Screenshot beaconDB map.png

“ [beaconDB](#) aims to be an alternative to Mozilla Location Services that offers public domain dumps of its WiFi database.

When Mozilla Location Services shut down, it wasn't able to publish the massive amount of access points its users had collected due to legal and privacy concerns. beaconDB obfuscates the data it releases so that it is not possible to reasonably estimate the location of a single device.

buat yang mau ikut kontribusi data lokasi (wifi, bluetooth, gps), alternatif dari Mozilla Location Service.

**2024-09-15 [www.stirlingpdf.com](https://www.stirlingpdf.com)**

stirlingpdf-home-dashboard-app-screenshot.jpg

“This is a robust, locally hosted web-based PDF manipulation tool using Docker. It enables you to carry out various operations on PDF files, including splitting, merging, converting, reorganizing, adding images, rotating, compressing, and more. This locally hosted web application has evolved to encompass a comprehensive set of features, addressing all your PDF requirements.

Stirling PDF does not initiate any outbound calls for record-keeping or tracking purposes.

All files and PDFs exist either exclusively on the client side, reside in server memory only during task execution, or temporarily reside in a file solely for the execution of the task. Any file downloaded by the user will have been deleted from the server by that point.”

buat yang suka berkutat dengan file pdf recommended banget pake ini, paling lengkap yg saya tau, bisa buat di windows maupun linux (pake docker)

## 2024-09-17 Cyotek WebCopy : Copy websites locally for offline browsing

Cyotek Webcopy Application Screenshot.png

“Cyotek WebCopy is a tool designed to create local copies of websites for offline viewing.

WebCopy will automatically crawl a website and download its content, remapping links to other files to allow offline browsing. WebCopy can authenticate with websites, post forms, and allows the use of rules to download only the content you wish. Many advanced configuration options are available, including proxy servers, sub domain support, crawling linked servers (for example a CDN), advanced control over HTTP options, and much more.”

pengen nyoba di Windows, penasaran

## 2024-09-21 Grow Your Own Services : Are you fed up with Facebook, Google and Microsoft?

Grow Your Own Services.jpg

“Grow Your Own Services aims to encourage people and organisations to create their own internet services by highlighting managed hosting options.

Managed hosting is by far the easiest way to make your own internet services, but it isn't very well advertised. Hopefully more people will realise they don't need to be techno-nerds to build their own internet presence.

This site encourages traditional sustainable decentralisation, as used by telephones, email and the world wide web. There are lots of good reasons why this is the best way of doing things.”

mirip2 dengan [indieweb](#) , menarik buat dibaca2
